DETAILED ACTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, drawn to a method of analyzing nucleotide sequence information using data from a one step data reduction process, classified in class 702, subclass 20.
- III. Claims 25-29, drawn to a system for analyzing nucleotide sequence information, classified in class 702, subclass 20.
- IV. Claims 30-33, drawn to a method of analyzing nucleotide sequence information using data from a performed first and second data reduction process, classified in class 702, subclass 20.

Inventions I, II, and III are directed to related subject matter of analyzing nucleotide sequence information. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, group I is drawn to a method of analyzing nucleotide sequence information using data from a one step data reduction process. The invention of group I involves reducing selected data from a superset by identifying groupings and selecting at least one to be included in the data set analyzed. Group II is drawn to a system for analyzing nucleotide sequence information. The system involves a data collection component, first data analysis component, first computational component for calculating entropy values, and a second data analysis component for

identifying refined data. Group II is drawn to a method of analyzing nucleotide sequence information using data from a performed first and second data reduction process. The invention of group III involves two data reduction steps, the first by identifying redundant SNPs and the second by using pairwise comparisons to identify analogous SNPs.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
